Context

The background of the slide is a deep blue color. It is overlaid with a complex, organic pattern of thin, white, translucent lines that resemble a network or a web. Scattered throughout this network are numerous small, white, circular dots of varying sizes, some of which appear slightly blurred, giving the overall effect a sense of depth and movement, similar to a microscopic view of a material or a digital network visualization.

Replica

The background of the slide is a close-up photograph of crumpled, translucent blue fabric. The fabric has a complex, wavy texture with many folds and creases. Scattered throughout the fabric are numerous small, white, circular specks, which appear to be dust or small beads. The overall color palette is a range of blues, from light to deep, with the white specks providing a high-contrast accent.

The background of the slide is a close-up photograph of a light blue, semi-transparent fabric, possibly tulle or a fine mesh, draped and gathered. The fabric has a complex, crinkled texture. Scattered throughout the fabric are numerous small, white, spherical specks, which could be dust, lint, or small beads. The lighting is soft, creating subtle gradients of blue and highlighting the texture of the material.

Experiments

- © So many inconveniences due to weather conditions and expensive hardware
 - ❖ Lack of solar panel
 - ❖ Lack of PowerStation for 802.11
 - ❖ Lack of GPS
 - ❖ Use of different Telosb motes
 - ❖ Lack of WQM sensors - Indispensable for tests!!
(+20000\$)

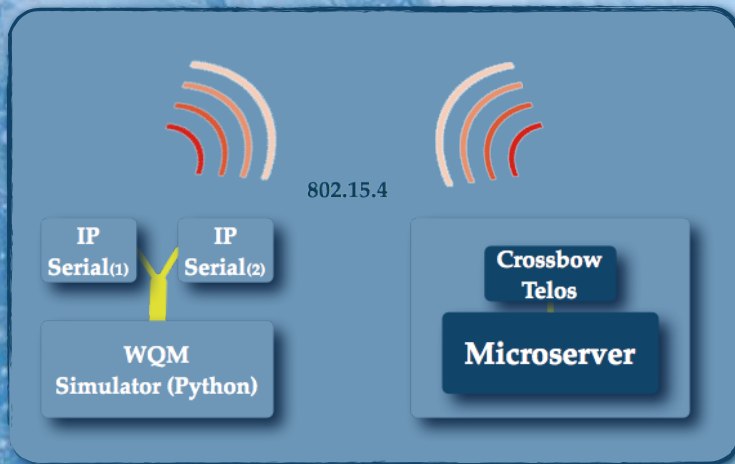

Experiments

© Simulate WQM sensors - Python scripts

Experiments

© Simulate WQM sensors - Python scripts

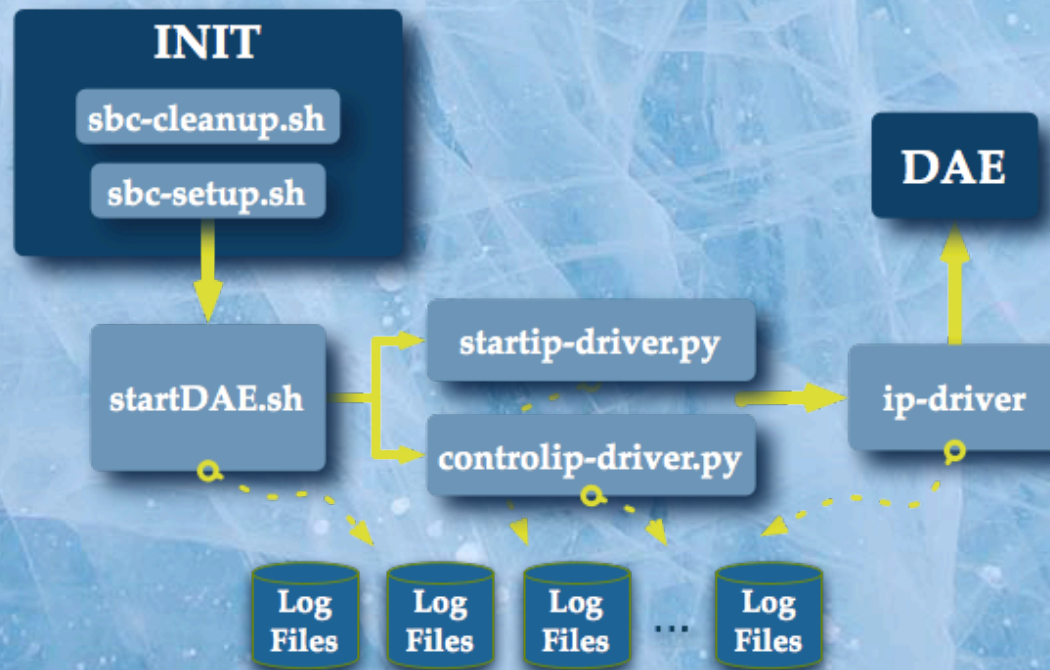

- ❖ Read from serial port - commands sent by the DAE
- ❖ Write in serial port - *fake* data taken from WQM's log files
- ❖ Emulate the complete data acquisition process

© Testbed for MANA's new version!!

Experiments

- ◎ Capoh system meant to operate 1 season - 9 months
- ◎ Tests can not reproduce weather conditions
- ◎ Feedback is always welcome...

Experiments

- ◎ System running for 2 weeks - 20min drop-dead & 20min sleep
 - ❖ PCS tolerates high-rate operation - reliability
 - ❖ DAE is successfully initialized by *scripts* - controlled and uncontrolled inconveniences - recovery
 - ❖ DAE handles corrupted data & log it - robustness
 - ❖ Log files contain everything - redundancy
 - ❖ Contributions have proved to work fine and be integrated - ready for deployment in Greenland

Conclusion

● Objectives:

- ❖ Create a Replica of MANA inside ITU
 - ❖ Document previous and new work
 - ❖ Provide a Testbed!
 - ❖ Integrate our contributions
 - ❖ Make some tests and get feedback
 - ❖ Obtain a stable system to be deployed in Greenland
- 

Conclusion

© Approach (Chronologically):

- ❖ Serial communication - TinyOS & RFSerial
- ❖ Build the Replica - Rob Fatland's Vexcel MicroServer
- ❖ Communication between TS-7260(SBC) and PCS
- ❖ Modify INIT sequence in Debian 5 (Lenny) - *Scripts*
- ❖ DAE adaptation to 6LowPAN
- ❖ System Integration - Components altogether!
- ❖ Contribution to TinyOS' TCP stack

Conclusion

© Approach (Chronologically):

- ❖ Serial communication.. Watchdog preventing from mote hanging - Deadlock
- ❖ WQM simulator - Python scripts
- ❖ Test session - Feedback
- ❖ Modifications in INIT *scripts*
- ❖ Renewed version of Capoh Architecture!!!
- ❖ DOCUMENTATION!

The background of the slide is a photograph of several large icebergs floating in a body of water. The icebergs are white and have jagged, irregular shapes. The water is a deep blue color, and the overall scene is captured from a slightly elevated perspective, showing the texture of the ice and the calm surface of the water.

Tak for jeres
opmærksomhed :)
